

Enrail™ SERIES 200
T-Rail System

Introducing Enrail™

Lean on Enduris.
And not just
because we
cracked the code.

WE CRACKED THE CODE

It means we've been
put to the ultimate test.
And passed with
flying colors.

The testing facility we chose is well-known, and has been pushing our fencing and railing programs to the breaking point for a long time. In fact, for a quarter of a century, ATI has been at the forefront of comprehensive testing services for building materials. ATI is accredited by the International Accreditation Services (IAS) as a quality assurance agency and recognized by the state of Florida Department of Community Affairs. The CCRR program is accredited by ANSI as a product certification program.

Over the years they have evolved from a pure testing facility to a credible and accessible source for Code Approval. We submitted to the rigorous testing for AC 174 Standard, and AC10, and the result has been a well-deserved Code Compliance Research Report.

Here's what it means to you. Anyone can fabricate and install vinyl railing, but not just anyone can fabricate and install AC 174 Code Approved vinyl railing. As a fabricator or contractor, you will have to follow and use stringent Code Approved installation methods and use the exact designs and materials they call for.

**And that's where
Enduris comes in.**

We have put together a complete program with everything you will need to have a success in this exclusive new arena. And there are a wide variety of components from which to choose – rail profiles, brackets, balusters and colors.

Ask your Enduris representative about becoming a CCRR listee, or visit our website for more information.

CCRR-0107
AC 174/AC 10 Code Approved Railing – with plenty of design
options. Independently Certified by Architectural Testing, Inc.

WE CRACKED THE CODE

Enrail™ SERIES 200
T-Rail System

We're making LIFE-SAFETY railing accessible –

with code approved railing systems, and the certification programs to help you take advantage of them.

One and Two-Family Dwellings and Residential. Enduris offers you code approved railing at several price points. We have certified this 200 series railing system to work with premium zinc brackets, at up to 10' spans, and with more cost-effective (but still amazingly strong) PVC brackets with spans of 6' and 8'. The 6' and 8' spans only require metal inserts in the top rail, not the bottom as well.

Ask your Enduris Enrail™ representative for more details on the Series 200 railing system, and how to get set up to follow all the necessary installation and fabrication requirements.

For complete information, visit our website at enrailing.com or call 1 888-329-7428.
